

Bridge Building

Build a bridge to carry to most lollies!

What you get

10 sheets of A4 paper (no other materials)

5 minutes to plan

25 minutes to build

You can do whatever you want with the paper, not just fold it.

Use your imagination!

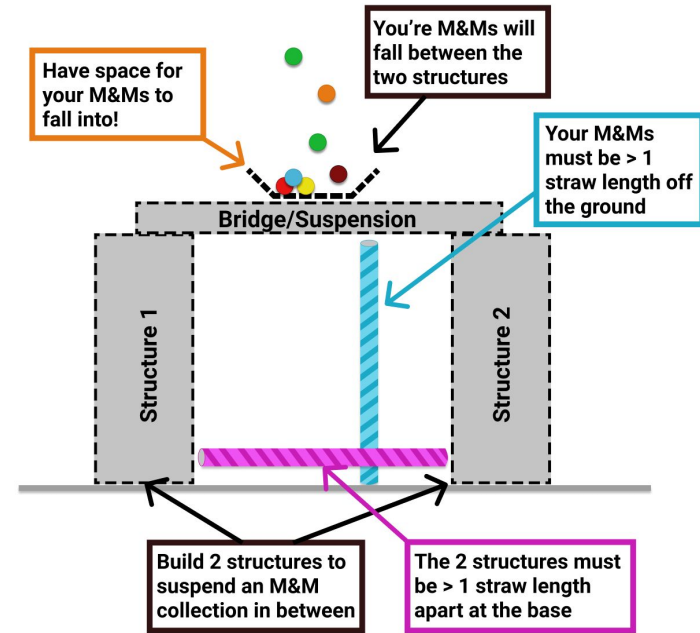

What you need to build

A bridge with enough space underneath to fit a boat:

- one straw high and
- one straw wide

You will get a few lollies to test with whilst you a building.

The bridge that holds the most weight wins!

....and another thing

You should be in groups of 3-4

We will ONLY weight on your bridge if the straw "boat" can pass underneath.

There will also be a couple of tutor teams competing for an extra challenge!!

Can your bridge beat theirs?
