### **Guess Who!**

## Welcome to the labs!

## Thank you to our Sponsors!

Platinum Sponsor:

## Who are the tutors?

## Who are you?

## Introduce your partner

- Find a partner (someone you've never met before)
- 2. Find out:
  - a. Their name
  - b. What (school) year they are in
  - c. A fun fact about them!
- 3. Introduce them to the rest of the group!

## Log on

## Jump on the GPN website

## girlsprogramming.network/workshop

#### You can see:

- These slides (to take a look back or go on ahead).
- A digital copy of your workbook.
- Help bits of text you can copy and paste!

There's also links to places where you can do more programming!

## Tell us you're here!

Click on the

Start of Day Survey

and fill it in now!

## Today's project!

Guess Who?

## Using the workbook!

The workbooks will help you put your project together!

Each **Part** of the workbook is made of tasks!

#### Tasks - The parts of your project

Follow the tasks **in order** to make the project!

#### **Hints - Helpers for your tasks!**

Stuck on a task, we might have given you a hint to help you **figure it out!** 

The hints have <u>unrelated</u> examples, or tips. **Don't copy and paste** in the code, you'll end up with something **CRAZY**!

#### Task 6.2: Add a blah to your code!

This has instructions on how to do a part of the project

- 1. Start by doing this part
- 2. Then you can do this part

#### Task 6.1: Make the thing do blah!

Make your project do blah ....

#### Hint

A clue, an example or some extra information to help you **figure out** the answer.

print('This example is not part of the project' )

## Using the workbook!

The workbooks will help you put your project together!

Check off before you move on from a **Part**! Do some bonuses while you wait!

#### Checklist - Am I done yet?

Make sure you can tick off every box in this section before you go to the next Part.

#### **Lecture Markers**

This tells you you'll find out how to do things for this section during the names lecture.

#### **Bonus Activities**

Stuck waiting at a lecture marker?

Try a purple bonus. They add extra functionality to your project along the way.

If you can tick all of these off you're ready to move the next part!

- ☐ Your program does blah
- ☐ Your program does blob

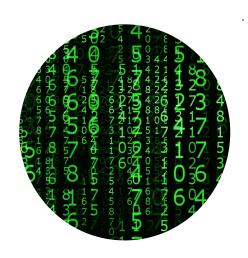

#### ★ BONUS 4.3: Do some extra!

Something to try if you have spare time before the next lecture!

## Intro to Programming

## What is programming?

## Programming is not a bunch of crazy numbers!

It's giving computers a set of instructions!

## A Special Language

A language to talk to dogs!

Programming is a language to talk to computers

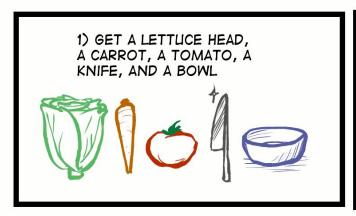

## People are smart! Computers are dumb!

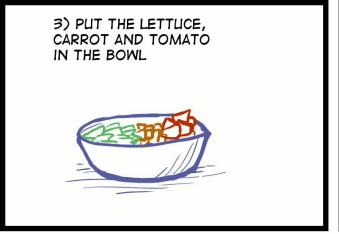

#### SALAD INSTRUCTIONS

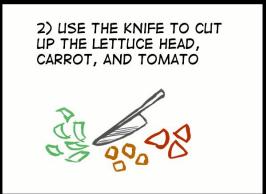

Programming is like a recipe!

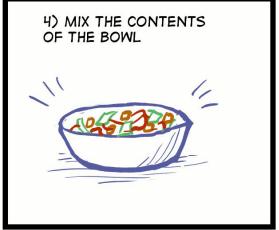

Computers do EXACTLY what you say, every time.

Which is great if you give them a good recipe!

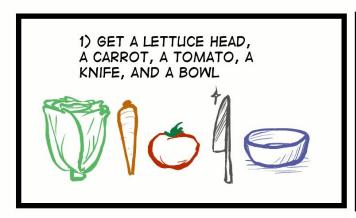

## People are smart! Computers are dumb!

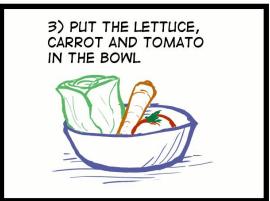

#### SALAD INSTRUCTIONS

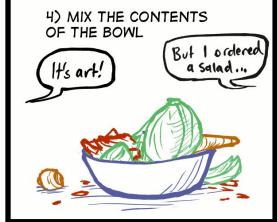

But if you get it out of order....

A computer wouldn't know this recipe was wrong!

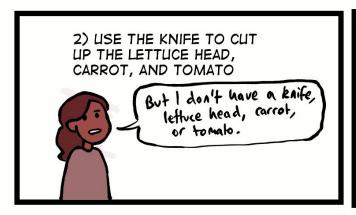

## People are smart! Computers are dumb!

#### SALAD INSTRUCTIONS

Computers are bad at filling in the gaps!

A computer wouldn't know something was missing, it would just freak out!

## Everyone/thing has strengths!

- Understand instructions despite:
  - Spelling mistakes
  - Typos
  - Confusing parts
- Solve problems
- Tell computers what to do
- Get smarter every day

- Does exactly what you tell it
- Does it the same every time
- Doesn't need to sleep!
- Will work for hours on end!
- Get smarter when you tell them how

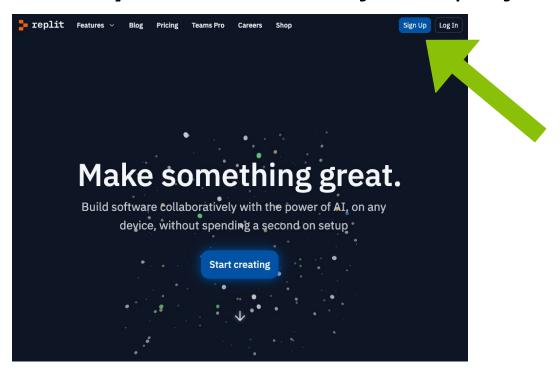

## Intro to Python

Let's get coding!

## Where do we program?

We'll use *Repl It* to make a Python project!

Go to replit.com in Google Chrome

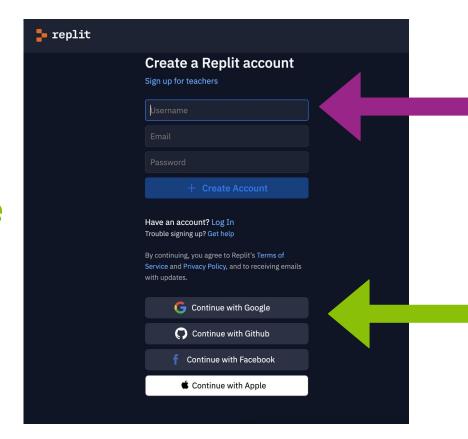

## Where do we program?

## You need to sign up or sign in to start coding

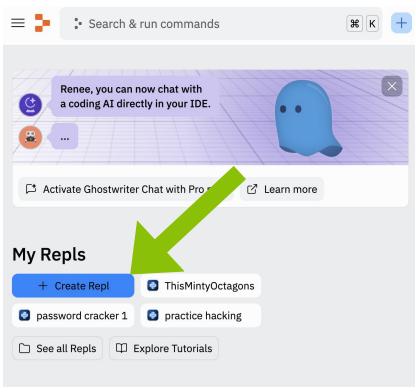

If you have a **Google** or **Apple** account it's easiest to use that.

Or use an **email address** you are able to log into.

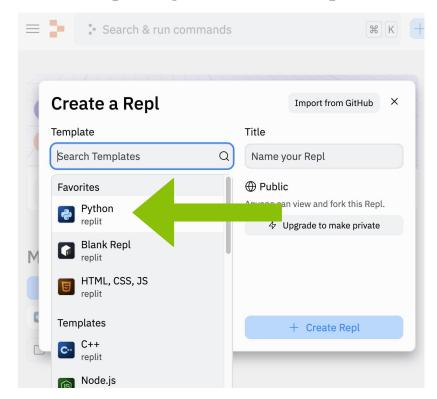

## Creating our Repl It Project

## Let's create a new project

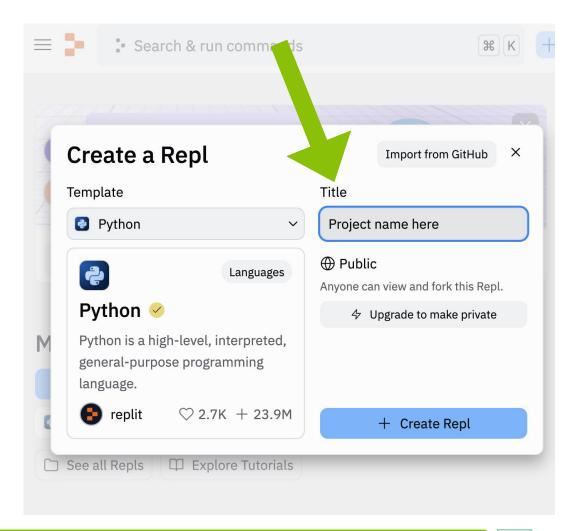

## Select Python for the project template

## Creating our Repl It Project

## Don't forget to give your project a name!

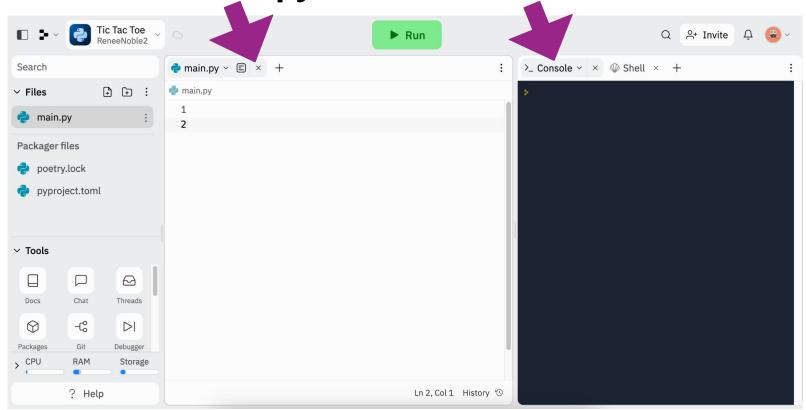

Name it after today's project!

## We're ready to code!

We'll write our project here in main.py

You can test out Python code in the console

## Test the **console!** Make a mistake!

## Type by **button mashing** the keyboard!

Then press enter!

Did you get a big red error message?

## Mistakes are great!

3yntaxError: tax

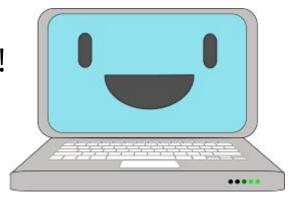

## Good work you made an error!

Importerror.

No module

humour

- Programmers make A LOT of errors!
- Errors give us hints to find mistakes
- Run your code often to get the hints!!
- Mistakes won't break computers!

Keyerror:
Hairy Potters

AttributeError:
'NoneType' object
has no attribute
'foo'

TypeError: Can't convert 'int' object to str implicitly

## We can learn from our mistakes!

Error messages help us fix our mistakes!
We read error messages from bottom to top

```
3. Where that code is

Traceback (most recent call last):

File "C:/Users/Madeleine/Desktop/tmp.py", line 9, in <module>
print("I have " + 5 + " apples")

TypeError: can only concatenate str (not "int") to str

2. What code didn't work
```

## Adding a comment!

Sometimes we want to write things in our file that the computer doesn't look at. We can use **comments** for that!

Sometimes we want to write a note for a people to read

```
# This code was written by Vivian
```

And sometimes we want to not run some code (but don't want to delete it!)

```
# print("Goodbye world!")
```

## Write some code!!

Watch a Tutor type this into the window
Then press enter!

Did it print:

hello world

???

We can print things in lots of different ways in python!
>>> print("Hello world!")
>>> print("Hello", "world!")
>>> print("Hello", "world", end="!")

We can print things in lots of different ways in python!
>>> print("Hello world!")
Hello world!
>>> print("Hello", "world!")
>>> print("Hello", "world", end="!")

We can print things in lots of different ways in python!
>>> print("Hello world!")
Hello world!
>>> print("Hello", "world!")
Hello world!
>>> print("Hello", "world", end="!")

We can print things in lots of different ways in python!

```
>>> print("Hello world!")
Hello world!
>>> print("Hello", "world!")
Hello world!
>>> print("Hello", "world", end="!")
Hello world!
```

Note that this last one will not have a new line after it!

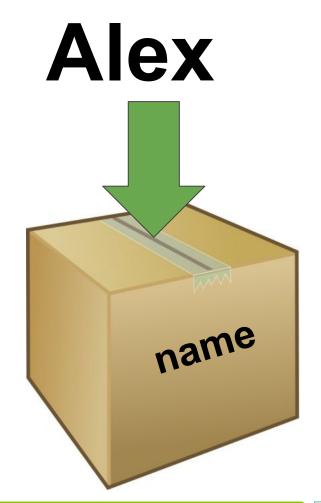

## Variables

# Variables are useful for storing things that change

(i.e. things that "vary" - hence the word "variable")

You can think of it like putting information in a box and giving it a name

## Variables

Instead of writing a name, we can use the name that is inside our variable! Here, we get the name out of the box.

print(name)

## Variables

Instead of writing a name, we can use the name that is inside our variable! Here, we get the name out of the box.

print(name)

Alex

## Reusing variables

We can replace values in variables:

```
animal = "dog"
print("My favourite animal is a " + animal)
animal = "cat"
print("My favourite animal is a " + animal)
animal = animal + "dog"
print("My favourite animal is a " + animal)
```

What will this output?

## Reusing variables

We can replace values in variables:

```
animal = "dog"
print("My favourite animal is a " + animal)
animal = "cat"
print("My favourite animal is a " + animal)
animal = animal + "dog"
print("My favourite animal is a " + animal)
```

```
What will this output? My favourite animal is a dog

My favourite animal is a cat

My favourite animal is a catdog
```

## Asking a question!

It's more fun when we get to interact with the computer!

#### Let's get the computer to ask us a question!

```
my_name = input('What is your name? ')
print('Hello ' + my_name)
```

What do you think happens?

## Asking a question!

It's more fun when we get to interact with the computer!

#### Let's get the computer to ask us a question!

```
my_name = input('What is your name? ')
print('Hello ' + my_name)
What do you think happens?
What is your name? Maddie
Hello Maddie
```

Tech

Inclusion

## Asking a question!

```
Writing input tells
                                                 This is the question
Store the answer
                         the computer to
                                                 you want printed to
 in the variable
                       wait for a response
                                                     the screen
   my_name
        my_name = input('What is your name? ')
        print('Hello ' + my_name)
        What do you think happens?
        What is your name? Maddie
                                                 We can use the answer
        Hello Maddie
                                                 the user wrote that we
                                                    then stored later!
```

## Project time!

You now know all about printing, variables and input!

## Let's put what we learnt into our project Try to do Part 0 - Part 1

The tutors will be around to help!

## Lists

## Storing groups of things in variables

- We know how to store individual things, but if we have a group of things?
- We can try to do this with variables

```
>>> day1 = 'Monday'
>>> day2 = 'Tuesday'
>>> day3 = 'Wednesday'
>>> day4 = 'Thursday'
>>> day5 = 'Friday'
>>> day6 = 'Saturday'
>>> day7 = 'Sunday'
```

But this can get long and hard to deal with really quickly...

## Lists can store multiple things

- It's better to create a list. A list is a data type, like integer and string, but cooler!
- A list is an ordered group of related items, all in the same variable
- So instead of using 7 variables to store the days, we can use one:

```
>>> days = ['Monday', 'Tuesday',
'Wednesday', 'Thursday', 'Friday',
'Saturday', 'Sunday']
```

## Creating lists

- A list is created using square brackets in Python
- Think of your four favourite things.....what are they?
- How could we store them in a list?

## Your Favourite Things!

## You can put anything into a list

You can have a list of integers

```
>>> primes = [1, 2, 3, 5, 11]
```

You can have a lists of strings

```
>>> colours = ['red', 'blue', 'green']
```

### Accessing Lists!

The favourites list holds four strings in order.

```
favourites = ['books', 'butterfly',
  'chocolate', 'skateboard']
```

We can count out the items using index numbers!

Indices start from zero!

### Accessing Lists

We access the items in a list with an index such as [0]:
 >>> favourites[0]

'Books'

 What code do you need to access the third item in the list?

## Falling off the edge

 Python complains if you try to go past the end of a list

```
>>> favourites = ['books', 'butterfly',
'chocolate', 'skateboard']
>>> favourites[4]
```

```
Traceback (most recent call last):
   File "<stdin>", line 1, in <module>
IndexError: list index out of range
```

#### List of lists!

You can put anything in a list, even more lists!
We could use a list of lists to store tennis partners.!

```
tennis_pairs =[["Alex", "Emily"], ["Kass",
"Annie"], ["Amara", "Viv"]]
```

## Project time!

Now you know all about lists!

# Let's put what we learnt into our project Try to do Part 2

The tutors will be around to help!

## If Statements

Conditions let us make decision.

First we test if the condition is met!

Then maybe we'll do the thing

If it's raining take an umbrella

Yep it's raining

..... take an umbrella

Computers store whether a condition is met in the form of

#### True and False

$$3 + 2 == 5$$

computers store whether a condition is met in the form of

#### True and False

Computers store whether a condition is met in the form of

#### True and False

Computers store whether a condition is met in the form of

#### True and False

Computers store whether a condition is met in the form of

#### True and False

Computers store whether a condition is met in the form of

#### True and False

Computers store whether a condition is met in the form of

#### True and False

So to know whether to do something, they find out if it's True!

```
fave_num = 5
if fave_num < 10:
    print("that's a small number")</pre>
```

So to know whether to do something, they find out if it's True!

```
fave_num = 5
if fave_num < 10:
    print("that's a small number")
That's the
condition!</pre>
```

So to know whether to do something, they find out if it's True!

```
fave_num = 5
if fave_num < 10:
    print("that's a small number")</pre>
```

## That's the condition!

Is it True that fave\_num is less than 10?

- Well, fave\_num is 5
- And it's True that 5 is less than 10
- So it is True!

So to know whether to do something, they find out if it's True!

```
fave_num = 5
if True

print("that's a small number")
```

Put in the answer to the question

Is it True that fave\_num is less than 10?

- Well, fave\_num is 5
- And it's True that 5 is less than 10
- So it is True!

So to know whether to do something, they find out if it's True!

```
fave_num = 5
if True
    print("that's a small number")

What do you think happens?
>>>
```

So to know whether to do something, they find out if it's True!

```
fave_num = 5
if True
    print("that's a small number")

What do you think happens?
>>> that's a small number
```

#### How about a different number???

```
fave_num = 9000
if fave_num < 10:
    print("that's a small number")</pre>
```

Find out if it's True!

```
fave num = 9000
   False
    print("that's a small number")
```

Put in the answer to the question

Is it True that fave\_num is less than 10?

- Well, fave\_num is 9000
- And it's not True that 9000 is less than 10
- So it is False!

How about a different number???

```
fave_num = 9000
if fave_num < 10:
    print("that's a small number")</pre>
```

What do you think happens?

```
>>>
```

How about a different number???

```
fave_num = 9000
if fave_num < 10:
    print("that's a small number")</pre>
```

What do you think happens? >>>

Inclusion

#### If statements

```
fave_num = 5
if fave_num < 10:
    print("that's a small number")
... controls this line</pre>
```

## Actually .....

```
fave_num = 5
if fave_num < 10:
    print("that's a small number")
    print("and I like that")
    print("A LOT!!")</pre>
```

This line ...

... controls anything below it that is indented like this!

```
fave_num = 5
if fave_num < 10:</pre>
    print("that's a small number")
    print("and I like that")
    print("A LOT!!")
```

What do you think happens?

```
>>>
```

```
fave_num = 5
if fave_num < 10:</pre>
    print("that's a small number")
    print("and I like that")
    print("A LOT!!")
>>> that's a small number
>>> and I like that
>>> A LOT!!
```

```
word = "GPN"
if word == "GPN":
   print("GPN is awesome!")
```

What happens?

```
word = "GPN"
if word == "GPN":
   print("GPN is awesome!")

What happens?
>>> GPN is awesome!
```

#### Else statements

#### else

statements means something still happens if the if statement was False

```
word = "Chocolate"
if word == "GPN":
   print("GPN is awesome!")
else:
   print("The word isn't GPN :(")
```

What happens?

#### **Project Time!**

You now know all about if and else!

# Let's put what we learnt into our project Try to do Parts 3 and 4

The tutors will be around to help!

## Random!

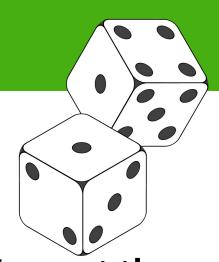

#### That's so random!

There's lots of things in life that are up to chance or random!

We're going to use the

random module!

We want the computer to be random sometimes!

#### Using the random module

Let's choose something randomly from a list!

This is like drawing something out of a hat in a raffle!

#### Try this!

- 1. Import the random module!
  - >>> import random
- 2. Copy the shopping list into IDLE
  - >>> shopping\_list = ["eggs", "bread", "apples", "milk"]
- 3. Choose randomly! Try it a few times!
  - >>> random.choice(shopping\_list)

## Using the random module

#### You can also assign your random choice to a variable

```
>>> import random
>>> shopping_list = ["eggs", "bread", "apples", "milk"]
>>> random_food = random.choice(shopping_list)
>>> print(random_food)
```

#### **Project Time!**

Raaaaaaaaandom! Can you handle that?

Let's put what we learnt into our project

Try to do Part 5

The tutors will be around to help!

## While Loops

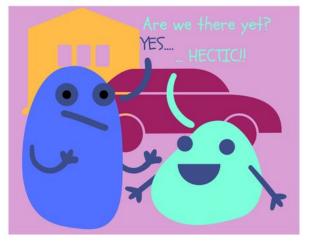

## Loops

How long do we

have to do this????

We know how to do things on repeat!

Sometimes we want to do some code on repeat!

#### What do you think this does?

```
i = 0
while i < 3:
    print("i is " + str(i))
    i = i + 1</pre>
```

#### What do you think this does?

```
i = 0
while i < 3:
    print("i is " + str(i))
    i = i + 1</pre>
```

```
i is 0
i is 1
i is 2
>>>
```

Stepping through a while loop...

#### One step at a time!

# i = 0 while i < 3: print("i is " + str(i)) i = i + 1</pre>

#### **MY VARIABLES**

#### One step at a time!

#### **MY VARIABLES**
