Human Pictionary Instructions

Split your team in half! Collect 4 grids from the tutors, two for each half of your team!

Each half of your team will do these steps:

1. Choose an image to draw on your grid (the tutors might have some ideas if you are stuck)
2. Draw it on your 5 x 5 grid
3. Convert your image into binary (1 = black, 0 = white)
4. Send the binary numbers to the other half of your team with a delivery tutor! Don't forget to tell the tutor what the image is meant to be.

When your team receives a message from the other half, do these steps:

1. On your other grid, convert the binary message back into an image
2. Tell the delivery tutor what you think the image is!

Once both halves of your team have correctly guessed an image, go up to the tutors for your chance to get a coin!

Here's a reminder for how to turn an image into binary!
